

PRESS RELEASE

One of the most exciting new releases by JStrong Industries.....
The battery isolator system...the Solution to your extreme electrical demand !

To eliminate the multi-battery drain problem, a battery isolator system acts as a check valve between the two battery systems, preventing current from flowing from one battery system to another. Each battery system is isolated and acts as an independent power source. So no matter how drained your accessory battery system becomes, it will never drain power from the battery you're depending on to start your engine and burn your headlights.

- Easy to follow step-by-step instructions
- Kit comes assembled and ready to install
- Comes pre-wired with all necessary hardware to install
